										<i>Pyrodinium bahamense</i>	0	
										<i>Karenia brevis</i>	0	
HABW150303-011 FDEP EBV006	Coon Key; N of (Estero Bay)	Lee	26.4287 -81.8832	12:13	.5	22.10	32.4	8.00	8.03			
										<i>Pyrodinium bahamense</i>	0	
										<i>Karenia brevis</i>	0	
HABW150303-012 FDEP EBV007	Mound House Dock (Estero Bay)	Lee	26.4462 -81.9272	12:38	.5	22.30	31.5	6.60	7.84			
										<i>Pyrodinium bahamense</i>	0	
										<i>Karenia brevis</i>	0	
HABW150303-013 FDEP EBERS2	Estero River; upstream	Lee	26.4386 -81.8400	12:20	.5	22.50	10.2	3.30	7.62			
										<i>Pyrodinium bahamense</i>	0	
										<i>Karenia brevis</i>	0	

Description	<i>Karenia brevis</i> cells/L	Possible Effects (<i>Karenia brevis</i> only)
NOT PRESENT - BACKGROUND	0 - 1,000	None anticipated
VERY LOW	> 1,000 - 10,000	Possible respiratory irritation; shellfish harvesting closures \geq 5,000 cells/L
LOW	> 10,000 - 100,000	Respiratory irritation; possible fish kills and bloom chlorophyll probably detected by satellites at upper range
MEDIUM	> 100,000 - 1,000,000	Respiratory irritation and probable fish kills
HIGH	> 1,000,000	As above plus discoloration

The above report is distributed by the Harmful Algal Bloom (HAB) Group at the Fish and Wildlife Research Institute of the Florida Fish and Wildlife Conservation Commission. The report is intended to (1) provide timely information on HABs in Florida waters to partner agencies and (2) facilitate communication among individuals who direct response activities to address public health concerns. We report on the abundance of [Karenia brevis](#) and [Pyrodinium bahamense](#). *Karenia brevis*, the Florida red tide organism, produces neurotoxins called brevetoxins that can kill fish and other marine life. Brevetoxins may cause respiratory irritation in beachgoers and Neurotoxic Shellfish Poisoning in humans that consume contaminated shellfish. *Pyrodinium bahamense* produces saxitoxins that can cause Paralytic Shellfish Poisoning or Saxitoxin Puffer Fish Poisoning in humans if contaminated shellfish or puffer fish are consumed. For information on red tide related human health issues, please refer to the [Department of Health Aquatic Toxins Program](#).

[State-wide status reports](#) including interactive Google Maps are provided weekly by our group and [shellfish harvesting area status maps](#) are provided by the Division of Aquaculture. Gulf Coast beach conditions can be found at [Mote Marine Laboratory's Beach Conditions Report](#). A full list of red tide related hotlines and information sources can be found [here](#). Data for other species can be requested at any time by sending an inquiry to HABData@myFWC.com. To learn more about HAB monitoring and research in Florida, please visit [Facebook.com/FLHABs](https://www.facebook.com/FLHABs).

DISCLAIMER: While every practical step has been taken to provide accurate information in these reports, the need for rapid distribution precludes extensive review. Further, reports are generated with limited interpretation and do not necessarily reflect all scientific observations.
